

Great Benefits & Great Looks

The unique fastener design allows easy on and off of your hatch covers and offers these other great benefits:

- ☼ Will slow the effects of hazing and crazing of the hatch lens;
- ☼ Reduces interior heat in cabins;
- ☼ Keeps penetrating sun from fading the interior fabrics and wood surfaces;
- ☼ Helps your air conditioning run more efficiently;
- ☼ Keeps the early morning sun from awakening you when you want to enjoy sleeping in;
- ☼ Covers will not transfer heat;
- ☼ Will float if dropped overboard;
- ☼ Has a low profile fastener twist lock design;
- ☼ Easily stores unnoticed behind or under cushions;
- ☼ No strings or cords to obstruct the opening and closing of hatches.

Our Story

After owning several boats throughout the years, each one larger of course, the need for comfort became apparent. We eventually wanted air conditioning to make boating more enjoyable. We purchased a small new ac system for our current boat, but installation space was limited thus restricting the size of the unit. Ecstatic and disillusioned was the mood of the day when we realized the difficulty in cooling a boat in this climate. We soon discovered a need to cover our tinted hatches. We knew that the sun was eating away at the surface of the acrylic, but had no idea how much heat was coming in until we air conditioned it. We didn't want to use canvas because of the strings and hassles of the on and off. We looked for an alternative and found none. We put our heads together and after several designs came up with this simple and affordable cover system. It worked so well. We realized it had many more benefits so we decided to share our system.
